THE SOURCE

HERITAGE & SCALE

A LEGACY CARVED IN STONE

NATURAL STONE
FOR A BETTER
TOMORROW

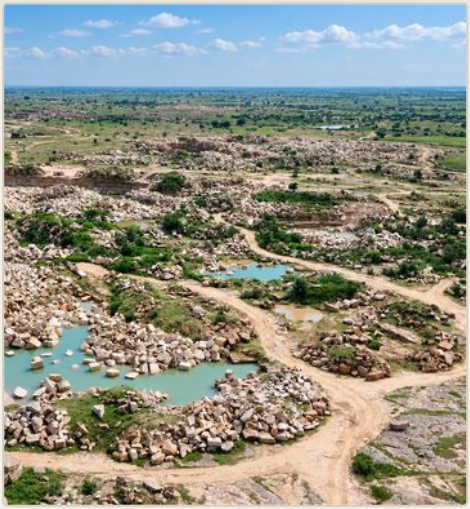

Our Mint Sandstone comes from a **250-acre** legal quarry reserve in the Gwalior region, a stone known for its character and consistency. Because we own the quarry, we can offer reliable supply, controlled quality and the capacity for large projects in India and overseas.

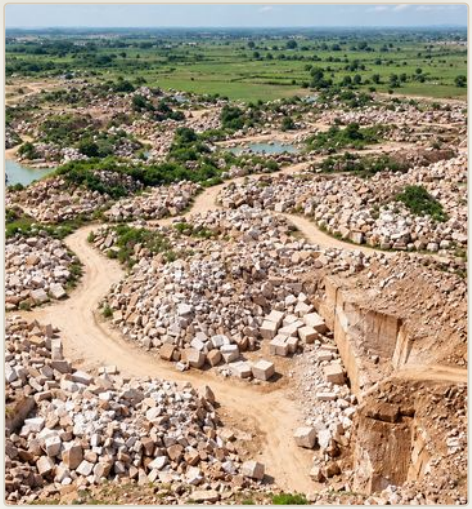

NATURAL BEAUTY
Unique colour and texture formed over millions of years.

LARGE SCALE RESOURCE
Consistent quality and long-term availability.

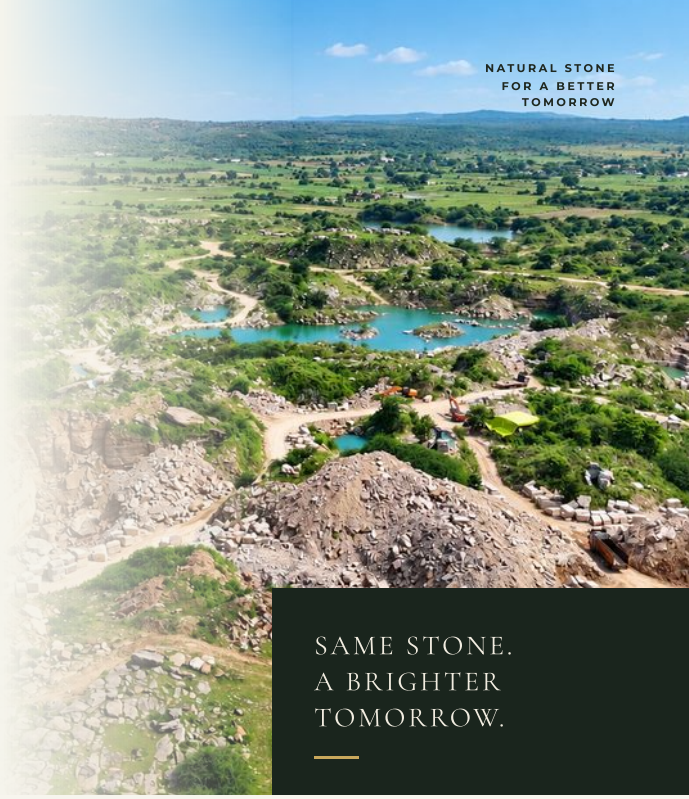

STRATEGIC LOCATION
Well connected for efficient logistics and export.

A Heritage of Trust

For generations, this stone has been a part of India's history.
Today we bring the same stone to the world, with the scale and capability to match.

FROM THE QUARRY TO THE WORLD

THE JOURNEY OF
MINT SANDSTONE

Every block of Mint Sandstone begins its journey in our **250-acre quarry** in Gwalior. Through responsible mining, careful selection and advanced processing, we turn raw stone into products for architecture, landscape and living spaces worldwide.

TOMORROW.

THE PROCESS

NATURAL STONE. A DEFINED JOURNEY.

From selective extraction to final dispatch, every stage is controlled to deliver consistent quality, reliable supply and stone that meets the demands of projects in India and overseas.

01 EXTRACTION
Understanding the natural formation and selecting suitable quarry faces.

02 BLOCK RECOVERY
Controlled extraction of stone blocks while preserving their natural integrity.

03 SORTING & SELECTION
Blocks are assessed for colour, texture, structure and intended application.

04 CUTTING & PROCESSING
Precision cutting transforms raw blocks into slabs, paving, steps, walling and bespoke elements.

05 FINISHING
Different finishes and surface treatments bring out the desired character and performance.

06 INSPECTION & DISPATCH
Finished products are checked, packed and prepared for projects in India and overseas.

THE CHARACTER OF

MINT SANDSTONE

GEOLOGY • PERFORMANCE • NATURAL BEAUTY

Mint Sandstone is a fine-grained, silica-rich sedimentary rock, naturally formed over millions of years. Its pale cream base and subtle warm tones make it a versatile and durable choice for contemporary and traditional spaces.

GEOLOGICAL COMPOSITION

Mint Sandstone is primarily composed of silica, with minor muscovite, enstatite and other natural minerals, giving it strength, stability and long-term durability.

Primary Composition	Silica (High Content)
Other Minerals	Muscovite, Enstatite
Grain Size	Fine to Medium
Rock Type	Sedimentary
Natural Colour Range	Ivory to Light Cream-Beige
Origin	Gwalior, Madhya Pradesh, India
